

Astrobiology Coloring Pages: Nancy Grace Roman Space Telescope

National Aeronautics and
Space Administration

Named after NASA's first Chief Astronomer, the Nancy Grace Roman Space Telescope will have a field of view at least 100 times larger than the Hubble Space Telescope and will advance studies of dark energy and infrared astrophysics. Data from Roman will be used to discover thousands of new exoplanets and will help astrobiologists understand whether or not these worlds could be suitable for life as we know it.
